

## Adiabatic cooling

## Options and accessories

### Partitioning panels

Equipping a unit with partition panels provides an **individual air intake duct for each and every fan** on the adiabatic condenser. This guarantees a higher capacity in case of fan failure by avoiding unintended air flows through an idle fan which bypasses the coil.

**Want to benefit from partitioning panels?** Contact your [local BAC representative](https://www.baltimoreaircoil.eu/en/products/partitioning-panels-trc).
